# BUILT GREEN

New homes meet the Islands' demand for eco-friendly living.

BY JENNY DE JESUS

Hawaii's premiere home builders know that building green makes sense—financially and for the future of our planet. Gentry Homes Ltd. has long been committed to creating affordable, sustainable homes for Island residents. An ENERGY STAR® partner since 2005, Gentry outfits its new homes with the very latest in environmentally responsible technology to help homeowners save money each month while reducing their carbon footprint.

Earlier this year, Gentry unveiled Sandalwood, the latest addition in the Ewa by Gentry master-planned community. Featuring four different two-story single-family home designs from \$500,000, each includes an ENERGY STAR® rating for the entire home.

Gentry Homes Ltd.

“These new homes reflect a new level of value in our marketplace and the Gentry Green Living features that are included in the price are not found in most other homes,” says Rick Hobson, vice president of Gentry’s sales and marketing.

The new homes range in size from 1,572 sq. ft. to 1,946 sq. ft. of interior living space and include green features such as the HECO-approved solar hot water heater with an automatic timer, dual glaze Low E high performance vinyl windows and a 16-SEER central air conditioning system with a MERV 8 filtration and UV light purification system to offer the cleanest air quality possible.

“When you combine all the energy-efficient, built-in features, the monthly savings will be substantial,” Hobson says.
